

Two evidence levels; independent fits for every array or facility

LEVEL 1 | Alice Springs

One facility; three co-located arrays

Sanyo / Hanwha / Qcells

2018 | 17 channels | 36 runs

Separate Train-fitted processing

Separate weights; Validation selection

LEVEL 2 | Yulara

One combined facility-level target

Common historical inputs

2017 | 7 channels | 12 runs

Separate Train-fitted processing

Separate weights; Validation selection

LEVEL 2 | NIST Ground

One external ground-array target

Common historical inputs

2017 | 7 channels | 12 runs

Separate Train-fitted processing

Separate weights; Validation selection

No pooled training and no transfer of the original 17-channel weights

Shared evaluation definitions, matched within each array/facility

6 h history | H12 / H48 / H96 / H144 | full and daylight

Last-value: primary support Daily: common exact-24-hour-lag target intersection
